I am a full stack web developer. I know one stack, but I don't know LangChain and LangGraph. These are the AI frameworks I need to learn because I have to integrate these frameworks in my assignment. Okay. So make me understand these two AI frameworks in such a way that I can apply and integrate these frameworks in my project. And I don't know anything about AI. So make me understand these frameworks in the form of story by giving examples of real-world implementations. And tell me everything about LangChain and LangGraph so that I can understand well and then integrate in my project. Also tell me what are these, why we use these frameworks, where we use these frameworks, and how we use these frameworks. And what is the need of these frameworks. And also tell me how can I integrate LangChain and LangGraph in my project.

Show less

Perfect. Since you're already a **MERN Full Stack Developer**, I'll teach this differently.

I won't assume you know AI, but I *will* use concepts you already know—Express middleware, React components, APIs, Redis, MongoDB, JWT, etc.

Think of this as "**AI for a Full Stack Developer.**"
